## ARCO - Brevettato

### ELEMENTO ELASTICO ASSIALE A ROTAZIONE A MOLLA – TENDICATENA AUTOMATICO – TENDICINGHIA AUTOMATICO

**Principali caratteristiche:** Robusto, Ridotto ingombro, lavora ad Alte e Basse temperature, Rotazione  $\pm 40^\circ$  oppure  $\pm 90^\circ$ , Componenti in acciaio, Carico sviluppato proporzionale. Molla ingrassata con guaina di protezione, Versatili sistemi di montaggio, Applicazioni originali ed innovative.

Gli articoli ARCO sono elementi elastici con funzionamento a rotazione. Gli angoli che si possono realizzare sono  $\pm 40^\circ$  e  $\pm 90^\circ$ . Le contenute dimensioni d'ingombro permettono di alloggiarlo anche in spazi ristretti. Enormemente utili risultano essere le ben 5 diverse posizioni di montaggio, che consentono di poterlo impiegare, in qualsiasi, situazione, senza dover costruire delle staffature particolari. La forma cubica della base di fissaggio, consente di poterlo montare e caricare (a mezzo chiave esagonale) con estrema semplicità. Normalmente vengono forniti in acciaio zincato, ma su richiesta possiamo realizzarli anche con altri tipi di finitura. Essendo completamente in metallo possono sopportare con facilità le situazioni più gravose, tipo alte o basse temperature e con particolari trattamenti anche quelle ove vi siano problemi chimico-fisici. I prodotti con guaina in gomma, aumentano le possibilità di applicazione in quanto sono maggiori le caratteristiche tecniche che li caratterizzano. In questi articoli la molla utilizzata è grezza ed oleata (a richiesta può essere utilizzato un grasso specifico) ed è ricoperta da una guaina in gomma che la ripara dall'ambiente circostante quali sporco ed agenti aggressivi esterni. La guaina in gomma è molto importante in quanto isola la molla dagli altri componenti e assorbe in larga parte le vibrazioni. Per applicazioni particolari possiamo fornire elementi elastici che possono operare da  $-50^\circ\text{C}$  a  $+300^\circ\text{C}$ . La particolare costruzione garantisce un funzionamento silenzioso, di grande affidabilità, permette innumerevoli e vantaggiose soluzioni di montaggio ed inoltre risolve con semplicità i vari problemi applicativi. Il principale settore d'impiego degli elementi elastici Arco è quello del tensionamento di catene e cinghie; ma come si può osservare i suoi utilizzi sono molteplici: gruppi di pressione – deceleratori – supporti di rulli, di nastri e di reti, sostegno per elementi in vibrazione tipo motori, compressori, vibratori, piani vibranti ecc. Il catalogo è diviso in due parti: nella prima sono illustrate le numerose versioni degli elementi elastici base e nella seconda vengono invece descritti gli accessori (KIT) che possono essere ad essi abbinati. A pagina 145 e 146 è illustrata la tabella di scelta kit che sintetizza le varie possibilità di abbinamento fra gli elementi elastici base e gli accessori. Per ulteriori chiarimenti o per applicazioni diverse da quelle qui illustrate vi invitiamo a consultarci, lieti di mettere a Vostra disposizione la nostra esperienza.

## ARCO - Patented

### AXIAL ELASTIC ELEMENT WITH SPRING ROTATION – AUTOMATIC CHAIN-TIGHTENER – AUTOMATIC BELT-TIGHTENER

**Main features:** Rugged, Limited overall dimensions, it works with High and Low temperatures, Rotation  $\pm 40^\circ$  or  $\pm 90^\circ$ , Components made of steel, proportional produced Load. Greased Spring with protection gaiter, Versatile installation systems, original and innovative applications.

The ARCO articles are elastic elements with rotation working. The possible rotation angles are  $\pm 40^\circ$  and  $\pm 90^\circ$ . Thanks to its limited overall dimensions it can be used even in narrow spaces. Its 5 different positions of installation have proved to be extremely useful, since they allow its utilization in any situation, thus eliminating the need for specific stirrups. The cubic shape of its securing base makes it extremely simple to install and load with a hexagonal wrench. These elements are usually produced in galvanized steel, but on request they are available with other types of finish as well. They can easily withstand the most severe conditions, such as high or low temperatures, since they are made entirely of metal and, thanks to specific processing, they can also withstand situations characterized by specific chemic-physical problems. The products with rubber gaiter increase the application opportunities since the technical features are more. In these articles the used spring is blank and greased (on request a specific grease can be used) and it's covered by a rubber gaiter, which protects it from the surrounding environment like dirty and external aggressive agents. The rubber gaiter is very important since it isolates the spring from the other components and absorbs largely the vibrations. For particular applications we can supply elastic elements which can operate in a temperature range from  $-50^\circ\text{C}$  to  $+300^\circ\text{C}$ . The particular construction guarantees a quiet functioning, of great reliability, allows countless advantageous solutions of assembly, and it furthermore solves simply the various applicative problems. Arco elastic elements find their main utilization in the field of belt- and chain-stretching; however, as You can see, they serve multiple uses: pressure units - decelerators - supports for scrapers and brushes – elastic suspensions – supports for rolls, belts, nets, supports for vibrating elements such as engines, compressors, vibrators, etc. The catalogue is divided in two parts: in the first are illustrated the many versions of the elastic basic elements and in the second are described the accessories (KIT) that can be combined with these. At page 145 and 146 is illustrated the "Choose-table Kit" that synthesizes the many combination possibilities between elastic basic elements and the accessories. For additional information and applications different from those ones illustrated here, please do not hesitate to contact us: we will be pleased to place our experience at Your disposal.

Elementi elastici ARCO – Tipo: **ARG ( $\pm 40^\circ$ ) / Elastic Elements ARCO – Type: ARG ( $\pm 40^\circ$ )**

**MATERIALI** Acciaio. Guaina di rivestimento in gomma isolante.

**TRATTAMENTI** I particolari in acciaio sono zincati. La molla interna è grezza oleata.

**IMPIEGO** Angolo di rotazione  $\pm 40^\circ$ . La guaina in gomma di rivestimento permette di proteggere la molla dagli agenti esterni ed evita che lo sporco possa accumularsi al suo interno. La gomma, inoltre, ha il compito di assorbire in buona parte le vibrazioni della molla e di isolare la stessa dagli altri componenti.

Temperatura di lavoro da -30°C a +60°C.

**MATERIALS** Steel. Covering garter in insulated rubber.

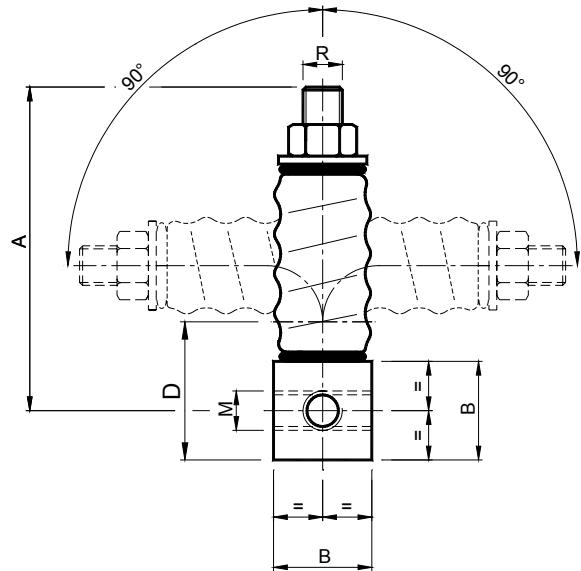

**TREATMENTS** The steel parts are galvanized. The spring inside is raw oiled.

**USE** Rotating angle  $\pm 40^\circ$ . The rubber covering garter allows to protect the spring from external agents and avoids that dirt may accumulate inside. The rubber has also the duty of absorbing the vibrations of the spring and of isolating the same from the other components.

Working temperature from -30°C to +60°C.

**TRATTAMENTI** I particolari in acciaio sono zincati.

La molla interna è grezza oleata.

**IMPIEGO** Angolo di rotazione  $\pm 90^\circ$ . La guaina in gomma di rivestimento permette di proteggere la molla dagli agenti esterni ed evita che lo sporco possa accumularsi al suo interno.

La gomma, inoltre, ha il compito di assorbire in buona parte le vibrazioni della molla e di isolare la stessa dagli altri componenti.

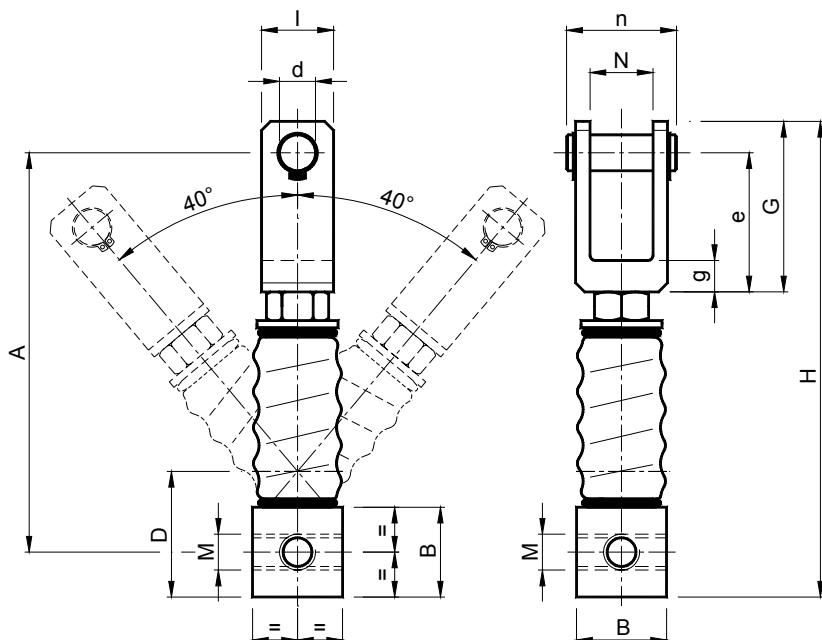

Temperatura di lavoro da -30°C a +60°C.

**MATERIALS** Steel. Covering garter in insulated rubber.

**TREATMENTS** The steel parts are galvanized. The spring inside is raw oiled.

**USE** Rotating angle  $\pm 90^\circ$ . The rubber covering garter allows to protect the spring from external agents and avoids that dirt may accumulate inside. The rubber has also the duty of absorbing the vibrations of the spring and of isolating the same from the other components.

Working temperature from -30°C to +60°C.

**Elementi elastici ARCO – Tipo: AFG ( $\pm 40^\circ$ ) / Elastic Elements ARCO – Type: AFG ( $\pm 40^\circ$ )**

**MATERIALI** Acciaio. La guaina di rivestimento è in gomma isolante. La forcella può essere in alluminio o in acciaio.

**TRATTAMENTI** I particolari in acciaio sono zincati. La molla interna è grezza oleata. La forcella in alluminio è sabbiata, quella in acciaio verniciata.

**IMPIEGO** Angolo di rotazione  $\pm 40^\circ$ . La guaina in gomma di rivestimento permette di proteggere la molla dagli agenti esterni ed evita che lo sporco possa accumularsi al suo interno. La gomma, inoltre, ha il compito di assorbire in buona parte le vibrazioni della molla e di isolare la stessa dagli altri componenti.

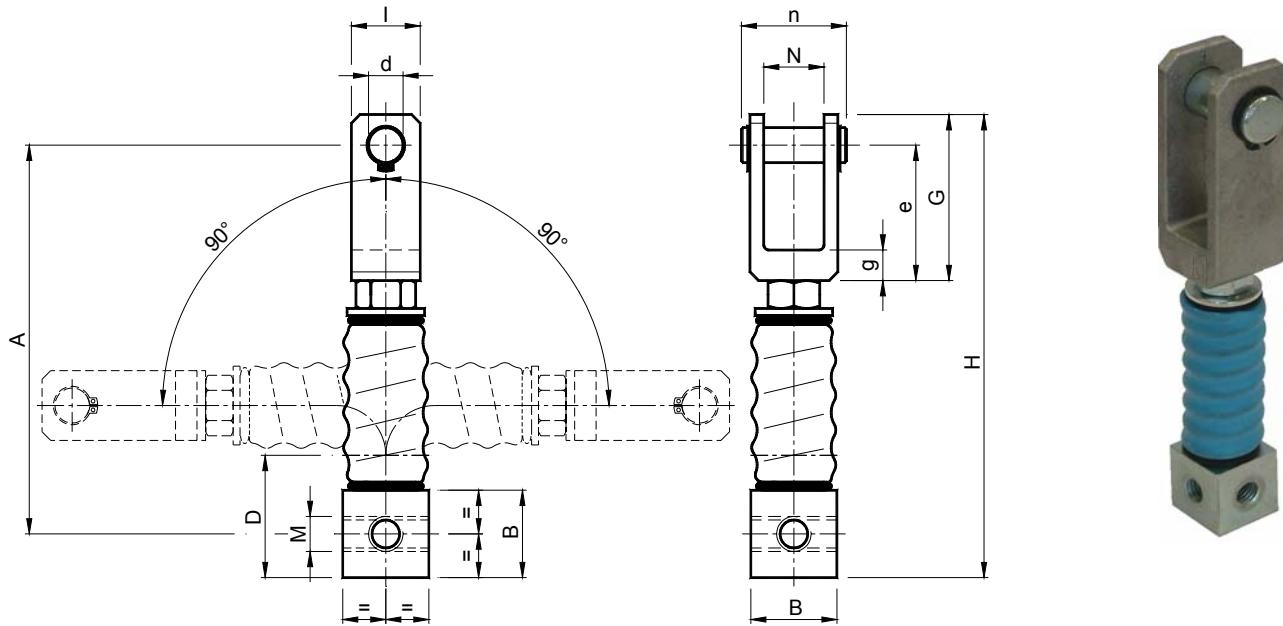

Temperatura di lavoro da -30°C a +60°C.

**MATERIALS** Steel. Covering garter in insulated rubber. The fork can be made of aluminium or steel.

**TREATMENTS** The steel parts are galvanized. The spring inside is raw oiled. The aluminium fork is sandblasted, the steel one is painted.

**USE** Rotating angle  $\pm 40^\circ$ . The rubber covering garter allows to protect the spring from external agents and avoids that dirt may accumulate inside. The rubber has also the duty of absorbing the vibrations of the spring and of isolating the same from the other components.  
Working temperature from -30°C to +60°C.

**Elementi elastici ARCO – Tipo: ARV ( $\pm 40^\circ$ ) / Elastic Elements ARCO – Type: ARV ( $\pm 40^\circ$ )**

In una trasmissione con lungo interasse, può essere necessario l'utilizzo di un tenditore automatico con doppio recupero, pertanto, a richiesta si possono fornire degli elementi elastici ARCO "angolo V" con doppia molla. Con questo sistema si può avere un doppio recupero dei giochi della catena. Questa applicazione può essere utilizzata anche per le cinghie con l'utilizzo di due rulli o di un rullo e una puleggia.

*In a transmission with a long interaxis it may be necessary to use an automatic tensioner with double recovery. Therefore, "V angle" ARCO elastic elements with double spring can be supplied on request. This system can be used to create double recovery of chain backlash. This application can also be used for belts using two rollers or one roller and a pulley.*

**MATERIALI** Acciaio. Spina di rotazione in ottone.

**TRATTAMENTI** Zincatura bianca.

**IMPIEGO** Angolo di rotazione  $\pm 40^\circ$ .

Temperatura di lavoro -30°C a +120°C.

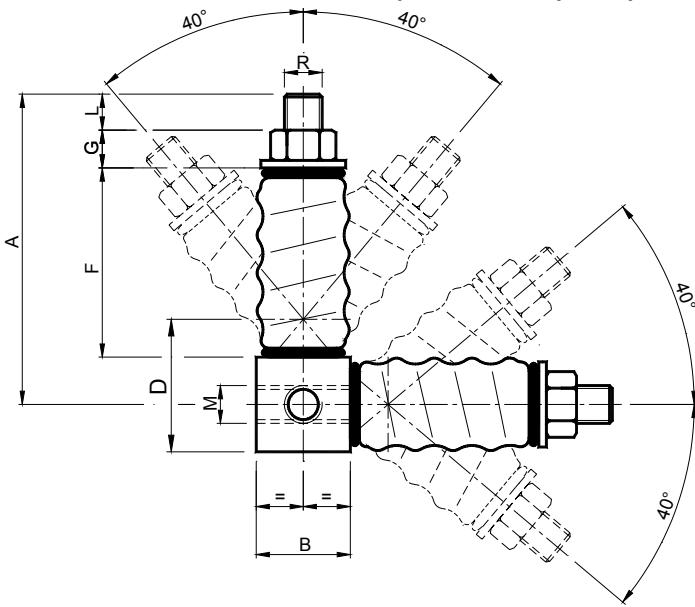

**MATERIALS** Steel. Rotation pin made of brass..

**TREATMENTS** White galvanization.

**USE** Rotation angle  $\pm 40^\circ$ .

Working temperature -30°C a +120°C.

## Istruzioni di montaggio / Assembly instruction

Arco è un elemento elastico a molla il cui principale utilizzo è quello di tendicatena o tendicinghia.

Arco è di semplice impiego in quanto con dei semplici gesti è possibile installare il tenditore nella trasmissione. Nella figura 1 riportiamo l'esempio del posizionamento di un tenditore ARCO tipo AB con kit tendicatena tipo VB. Posizionare l'elemento elastico sul tratto lento della trasmissione vicino al pignone motore. Inserire una vite sul foro centrale della base dell'elemento elastico, senza tirarla in modo che possa fare da fulcro per la rotazione. Con l'ausilio di una chiave esagonale "A" agire sulla base dell'elemento in modo da imprimere allo stelo un angolo di rotazione massimo compreso tra i 30° e i 35° e in maniera tale che l'asse dello stelo risulti il più possibile parallelo alla catena. Una volta raggiunta la posizione desiderata con la chiave esagonale "C" stringere la vite di fissaggio. Nelle applicazioni particolarmente gravose si può utilizzare l'accessorio "Blocco B" come braccio di reazione, che va spinato o bloccato con una vite.

*Arco is an elastic element with spring which is mainly used as a chain or belt tensioner.*

*Arco is easy to use and can be installed in a transmission following few simple steps. Figure 1 shows the example of the positioning of a type AB ARCO tensioner with type VB chain tensioner kit. Position the elastic element on the loose section of the transmission near the pinion motor. Insert a screw into the central hole in the base of the elastic element without pulling it, so that it can act as a fulcrum for rotation. Use an "A" hex key to work on the base of the element and give the stem a maximum rotation angle of between 30° and 35°, so that the stem axis is as parallel to the chain as possible. After reaching the desired position, use a "C" hex key to tighten the fastening screw. In particularly onerous applications, the accessory "Block B" can be used as a reaction arm, which is fixed with a pin or locked with a screw.*

### KIT per tendicatena / KIT for chain tighteners

Pattino in polietilene – Tipo: **LB** / Polyethylene sliding block – Type: **LB**

**MATERIALE** Polietilene ad alta densità molecolare. Bulloneria in acciaio zincato.

**IMPIEGO** Profilo semicircolare, adatto per grandi interassi.

Velocità di lavoro ≤20 m/min.

Temperatura di lavoro ≤70°C.

**MATERIALS** Polyethylene sliding block, high molecular density. Bolts and nuts made of galvanized steel.

**USE** Semi-circular profile suitable for reduced interaxis or for installation close to the pinion.

Operating speed ≤20 m/min.

Operating temperature≤70° C.

## KIT per tendicatena / KIT for chain tighteners

Pignone tendicatena (con cuscinetto) – Tipo: **KB** / Sprocket wheel set (with ball bearing) – Type: **KB**

**MATERIALI** Cuscinetto, corona e vite in acciaio.

**TRATTAMENTI** Corona e vite in acciaio zincato.

**IMPIEGO** Il pignone è costituito da una corona in acciaio, montata su cuscinetti unificati.

Velocità di lavoro ≤60m/min.

Temperatura di lavoro ≤100°C.

**MATERIALS** Crown, bearing, and screw are in steel.

**TREATMENTS** The crown and the pin are made of galvanized steel.

**USE** The sprocket consists of a steel crown, installed on a unified bearing.

Operating speed ≤60 m/min.

Operating temperature ≤100°C.

Il numero di giri descritto in tabella è indicativo. L'applicazione va valutata in base al tipo d'impiego, il fattore di servizio e le condizioni di lavoro.  
 The rpm indicated in the chart is approximate. The application must be considered according to the type of use, the service factor and the working conditions.

## KIT per tendicinghia / KIT for belt-tighteners

Puleggia trapezoidale in ghisa - Tipo: **PQ** (Z – A – B)  
 V-Belt cast iron pulley - Type: **PQ** (Z – A – B)

**MATERIALI** Puleggia in ghisa. Distanziali, cuscinetti e bulloneria in acciaio.

**TRATTAMENTI** Particolari metallici in acciaio zincato. Puleggia brunita o verniciata. Cuscinetti lubrificati.

**IMPIEGO** Puleggia per il pensionamento di cinghie trapezoidalni

Temperatura di lavoro della puleggia  $\leq 100^{\circ}\text{C}$ .

**MATERIALI** V-Belt pulley made of cast-iron. Spacers, bearings, bolts and nuts made of steel..

**TREATMENTS** Metallic components made of galvanized steel. The pulley is burnished or painted. Greased bearings.

**USE** Pulley for V-Belt, it is used for belt tensioning.

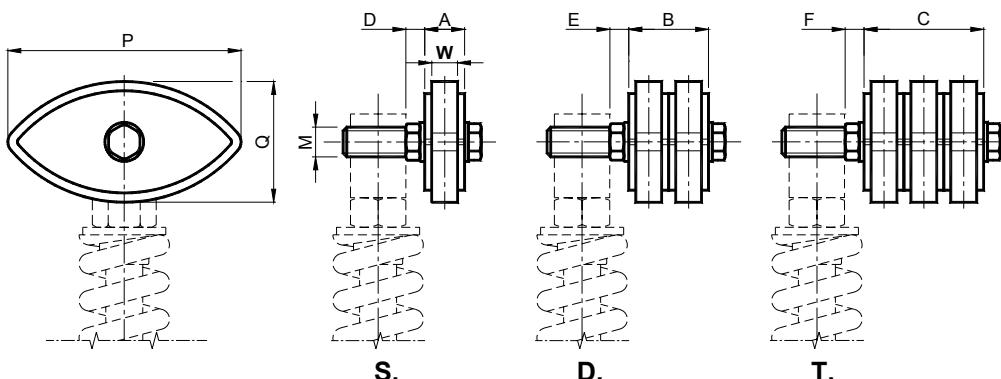

Operating temperature  $\leq 100^{\circ}\text{C}$ .

## KIT per tendicatena / KIT for chain tighteners

Pattino in polietilene - Tipo: OVA / Polyethylene sliding block - Type: OVA

MATERIALE Polietilene ad alta densità molecolare. Bulloneria in acciaio zincato.

IMPIEGO Profilo semicircolare, adatto per medi e grandi interassi.

Velocità di lavoro ≤20 m/min.

Temperatura di lavoro ≤70°C.

MATERIALS Polyethylene sliding block, high molecular density. Bolts and nuts made of galvanized steel.

USE Semi-circular profile suitable for middle-size and large interaxis.

Operating speed ≤20 m/min.

Operating temperature≤70° C.
